

Applications Group

- Liked the Will do / Will not do, but would like to see for a larger group, outside of DOE
- Need to understand trends -- how is new software being designed?
- Would like to see a Nirvana machine design
- Need to be able to easily write code that isn't performance critical, but combine with the performance code
- Groups all have different cross-over points (Oracle willing to do more work for less perf. than DOE)
- What do you want an OS to do (or not)?
- Willing to accept active messages / continuations / etc?
